Spot TV trouble symptoms at a glance
. . . fix them twice as fast!

NOW! SAVE HUNDREDS OF DOLLARS IN TV SERVICING TIME!

The short cut way of handling up to 90% of your television troubleshooting by the easy PICTURE ANALYSIS METHOD!

Just Out!

Ghirardi's PIX-O-FIX TV TROUBLE FINDING GUIDE Vol. 1

Covers

24 common television troubles identified by actual TV screen photos.

190 possible causes of these troubles identified and localized to the particular stage of the receiver where they are most likely to occur.

283 definite, easily understood remedies for these troubles.

4,500 words in CAUSE and REMEDY section to explain step by step what to do.

Hours of tedious, time-consuming troubleshooting can be cut to minutes. Repairs can be made twice as fast!

Just "dial" the new Ghirardi PIX-O-FIX TV TROUBLEFINDER GUIDE until the actual TV screen photo appearing in its "window" matches the screen picture on the defective set you are repairing. The proper Trouble Key Number also appears on the guide. This directs you to the tabulation giving all possible causes of this particular trouble and the stage or section of the receiver in which it is most likely to occur. But this is only the beginning!

The Pix-O-Fix Guide not only helps you locate the trouble quickly but then shows you exactly how to fix it. Step-by-step repair instructions follow. In most cases, the particular component most likely to be faulty is specified. Quick tests to apply to it are explained. If part substitution is likely to be more effective than an instrument test, this is recommended.

PIX-O-FIX is applicable to all television receivers. Operation is clear and simple. Money-back guarantee if you're not more than satisfied!

Note: *Ghirardi's PIX-O-FIX is designed and sold as a professional TV service device for serviceмen—NOT as a "fix-it-yourself" gadget for use by consumers.*

Only $1. **10 DAY Money back Guarantee**

Dept. RN-122, Rinehart Books, Inc., Technical Div, 232 Madison Ave., New York 16, N. Y.

Enclosed is $1 for which please rush a PIX-O-FIX TROUBLE FINDER GUIDE. If not satisfactory, I will return it postpaid within 10 days and you guarantee to refund my $1.

FM-AM TUNER

with built-in phono preamplifier and record equalizer

Now—Craftsmen brings you a tuner that matches all your finest records . . . is setting new records for versatility, too. The C-800 is further evidence that Craftsmen leadership in high fidelity is something you can put your finger on, something you can hear.

- Front panel selected equalization for AES, LP or EURopean recording characteristics. Inverse feedback compensated dual-triode phono preamp for correct turnover and roll-off characteristics.
- Improved AM reception. Wider bandwidth for better fidelity, and sharper IF bandpass skirts for greater selectivity.
- Double shadow tuning eye and AFC (no drift) on FM simplifies tuning. Front-panel AFC cut-out for tuning weak stations.
- Efficient new layout. Bottom plate, completely shielded chassis, minimize oscillator radiation, assure tuner isolation.
- Cathode follower audio output for remote installations; 2 volts at less than ½% dist. Detector output also has cathode follower for recording applications.
- Bass and treble controls continuously variable from attenuation to boost—flat position clearly marked. Selector positions: FM, FM with AFC, AM, TV, LP, AES, EUR, and SPare.
- Mahogany finish wood cabinet available.

HIGH FIDELITY—LOW COST! C-800 audio amplifier offers 10 watts ± 1 db, 15—20,000 cps, less than 1% distortion. New streamlined chassis design.

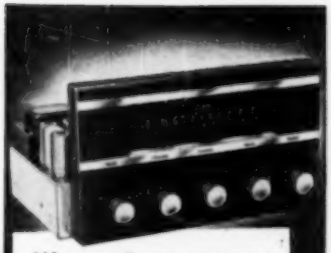
ERRATA

C1 in the circuit diagram of Fig. 3 ("The RADIO & TELEVISION NEWS PRE-AMP," page 51, November 1952 issue) should be a 250 μμfd. mica condenser and not a 250 μfd. unit as specified in the "Equalizer" parts list.

• • •

In the same article, R15, the "Volume Control," is in conjunction with S1 and not S2 as stated in Fig. 3.



We rest our case on evidence you can hear

Words can't prove the performance of this superb High Fidelity Tuner. Neither can witnesses. When it's time for a decision, your judgement of the CRAFTSMEN 10 is based on one thing: evidence you hear with your own ears. Listen—and the conclusive evidence of incomparable sensitivity and flexibility will turn your trial into a lifetime of *distinctly* better listening.

the craftsmen® 10
high fidelity FM-AM tuner

- Two cathode followers furnish both audio output and detector output for remote installations.
- Built-in pre-amplifier, compensated for variable reluctance pick-ups.
- Automatic Frequency Control entirely eliminates drift, simplifies tuning.
- 5 microvolts sensitivity on both FM and AM.
- 10 kc filter on AM eliminates inter-station squeal.
- Bass and treble tone controls for boost, cut, or 20-20,000 cycle flat response.

JUDGE THE C-500 TOO! Williamson all-triode circuit—99.99% distortion-free!

SUCH POPULARITY MUST BE DESERVED!

The exceptional value of the 447B Model is made possible by the tremendous quantities produced. The resulting very low price is responsible for its great popularity. These units are in a class with other makes of testers that sell for considerably more.

A 3" square D'Arsonval meter is used, having an accuracy of 2%. Accuracy of AC voltage measurements is improved by use of a new gold plated copper oxide rectifier.
